50X1-HUM

- d. Planning section.
- e. Commercial service.

CONFIDENTIAL

- f. Administration.
- g. Supply.
- h. Personnel.
- 10. The Ministry of Forestry assigns to each of the IPEIL regional administrations a forest which is to be exploited within one year. The regional IPEIL cuts the timber and selects it according to quality. It then sends it to the saw mills to be cut into planks. Lumber for export is turned over to Exportlemm. Lumber for domestic consumption, which amounts to three percent of the total annual production, is sent to Comlemn. Firewood is sent to the state enterprise Combustibil.
- 11. Besides the IPETL regional organizations, Sovrolemn has similar organizations in various parts of the country exploiting Rumanian forests which belong to it.
- 12. In all Rumania the following four factories make furniture and light wood-work: Deta, Balta Sarata, Gugești near Focșani, and Drajno near Bucharest.
- 13. IPEIL Pitesti should have produced 96,000 cubic meters of lumber in 1949, but only produced 70,000 cubic meters.
- 14. It is estimated that about eight hundred thousand cubic meters of lumber goes to the Soviet Union each year; about seventy percent through the port of Constanta and about thirty percent through Galati. Small quantities of lumber go through Radauti and Sighet. It is planned to double the quantity of production in 1951.
- 15. In Constants there is a special Soviet commission to receive all lumber going to the Soviet Union. The chief of the commission is a Soviet citizen, engineer Balabanov from Moscow. Two commission members are engineers Bietcov and Sachin. A similar commission is located at Galati and Radauti. A commission member at Radauti is a certain Lebedev.
- 16. Since 1 October 1950 the 24 IPELL's have organized into six groups called Trustlemm. The six Trustlemm centers are located at Pitesti, Brasov, Arad, Campulung-Bucovina, Iasi, and Bucharest. These trusts are branches of the Ministry of Forestry and have the same administration as the Ministry of Forestry.
